DOUBLE COLUMN LIFT

In the field of automotive maintenance and repair, the two-post lift serves as the core equipment for achieving vertical lifting of vehicles. With its stable support performance, flexible working space, and wide vehicle compatibility, it has become an essential tool for automotive 4S shops, comprehensive repair shops, and car beauty salons. Whether for routine maintenance (such as oil changes, chassis checks), fault repairs (such as transmission repairs, suspension replacements), or body inspections, the two-post lift can easily lift vehicles to the appropriate height, providing repair personnel with a safe and convenient working environment, effectively addressing the pain points of limited space and low efficiency associated with traditional pit repairs.

PRODUCT FEATURES

01

DOUBLE-COLUMN STRUCTURE:

Using two symmetrically distributed columns as the core support, manufactured by integrated forming and welding process.

THE BASE IS FIXED TO THE GROUND:

The base of the column is equipped with a widened and thickened base to enhance the stability of the entire machine.

02

03

ELEVATOR SYSTEM:

Stable and efficient, precise control.

SUPPORT AND LOCK:

Adopts a dual safety protection design of 'mechanical locking and hydraulic locking'.

04

05

ADAPT TO MULTIPLE TYPES OF REPAIRS:

Adopting a "dual-column symmetrical layout", there are no obstructions underneath the chassis after the vehicle is lifted.
