# MATRYOSHKA CONTAINER

In the field of global logistics and international trade, the space utilization rate of containers and the cost of empty container returns directly determine logistics efficiency and company profits. Nesting containers, also known as nested containers, rely on size-matching design and standardized structural innovations akin to Russian nesting dolls, breaking the bottleneck of traditional container empty transport which occupies large spaces and incurs high transfer costs. At the same time, they are compatible with existing intermodal transport systems, making them a core choice for foreign trade companies, logistics service providers, and port operators to reduce costs, and they are widely suited for the transportation needs of various goods such as cross-border e-commerce, automotive parts, and electronic products.

## PRODUCT FEATURES

**01****CORE DESIGN:**

The perfect integration of nested structures and standard systems.

**FULL-LINK STANDARDIZED ADAPTATION:**

Completely solve the pain points of non-standard small-sized containers being 'unable to transfer between sea and land, and difficult to stack and store'.

**02****03****IMPROVEMENT IN LOADING AND UNLOADING EFFICIENCY:**

Relying on the standard angle fittings and built-in roller design, the lifting of the mother box and the placing of the sub-box can be completed quickly.

**FLEXIBLE REUSE IN MULTIPLE SCENARIOS:**

The mother box can be used independently for loading large goods (such as machinery), while the sub-box is suitable for medium and small batch goods (such as electronic products, automotive parts), and after splitting, it can meet the delivery needs of 'one main and multiple branches'.
